The Usefulness of Financial Accounting Information: Evidence from the Field**

Github repository: https://github.com/joachim-gassen/use_fai

Additional Analyses Unreported in the Paper

Table AMD1: Subject Demographics by Sample (Survey Experiment)

Panel A: Country of Work

| Country of Work | Experimental Sample | Full Sample |
|-----------------|---------------------|-------------|
| Austria | 2 | 2 |
| Belgium | 5 | 5 |
| Canada | 4 | 4 |
| Croatia | 1 | 2 |
| Denmark | 5 | 7 |
| France | 1 | 3 |
| Germany | 3 | 6 |
| Italy | 3 | 3 |
| Norway | 2 | 2 |
| Portugal | 1 | 1 |
| Serbia | 1 | 1 |
| Spain | 2 | 3 |
| Sweden | 2 | 3 |
| Switzerland | 5 | 6 |
| United Kingdom | 20 | 28 |
| United States | 5 | 5 |
| Total | 62 | 81 |

Fisher's exact test for differences between *Experimental Sample* and excluded observations *p*-value (two-tailed) = 0.556.

Panel B: Age Group

| Age Group | Experimental Sample | Full Sample |
|-----------|---------------------|-------------|
| 20-25 | 1 | 1 |
| 26-30 | 4 | 5 |
| 31-35 | 5 | 7 |
| 36-40 | 9 | 11 |
| 41-45 | 15 | 20 |
| 46-50 | 13 | 16 |
| 51-55 | 6 | 8 |
| 56-60 | 5 | 8 |
| >60 | 4 | 5 |
| Total | 62 | 81 |

Fisher's exact test for differences between *Experimental Sample* and excluded observations *p*-value (two-tailed) = 0.989.

Table AMD1 (continued)*Panel C: Nature of Occupation*

| Occupation | Experimental Sample | Full Sample |
|---------------------|---------------------|-------------|
| Fund Manager | 34 | 44 |
| Analyst (sell-side) | 17 | 22 |
| Analyst (buy-side) | 8 | 12 |
| Other | 3 | 3 |
| Total | 62 | 81 |

Fisher's exact test for differences between *Experimental Sample* and excluded observations p -value (two-tailed) = 0.746.

Panel D: Investment Characteristics

| Investment Characteristic | Experimental Sample | Full Sample |
|---|---------------------|-------------|
| <u>By asset class:</u> | | |
| Equity only | 53 | 69 |
| Debt only | 6 | 9 |
| Equity and debt | 3 | 3 |
| p -value for differences (two-tailed) | 0.615 | |
| <u>By listing type:</u> | | |
| Public firms only | 46 | 58 |
| Public and private firms | 12 | 17 |
| Private firms only | 4 | 6 |
| p -value for differences (two-tailed) | 0.604 | |
| <u>By industry focus:</u> | | |
| None | 27 | 36 |
| Non-financial | 26 | 34 |
| Financial | 9 | 11 |
| p -value for differences (two-tailed) | 1.000 | |
| <u>By geographic focus:</u> | | |
| Europe | 32 | 46 |
| World | 22 | 27 |
| North America | 6 | 6 |
| Asia | 2 | 2 |
| p -value for differences (two-tailed) | 0.321 | |
| Total | 62 | 81 |

Table AMD1 (continued)*Panel E: Investment Experience*

| Variable | Obs. | Mean | Std. Dev. | P25 | Median | P75 |
|---|------|----------------|-----------|----------------|--------|-------|
| <i>Full Sample</i> | | | | | | |
| Number of stocks monitored per year | 77 | 61.1 | 70.0 | 18.0 | 35.0 | 85.0 |
| Years of experience overall | 81 | 20.1 | 8.6 | 15.0 | 20.0 | 25.0 |
| Years of experience in current position | 78 | 8.9 | 7.6 | 3.0 | 7.5 | 13.0 |
| <i>Experimental Sample</i> | | | | | | |
| Number of stocks monitored per year | 60 | 68.4 | 77.2 | 16.5 | 40.0 | 100.0 |
| Years of experience overall | 62 | 20.2 | 9.0 | 14.0 | 20.0 | 25.0 |
| Years of experience in current position | 60 | 8.9 | 8.1 | 3.0 | 6.7 | 12.5 |
| <i>Test for differences</i> | | <i>p-value</i> | | <i>p-value</i> | | |
| Number of stocks monitored per year | | 0.085 | | | 0.456 | |
| Years of experience overall | | 0.781 | | | 0.969 | |
| Years of experience in current position | | 0.958 | | | 0.487 | |

Presented *p*-values are two-tailed and based on *t*-tests (Wilcoxon sum of rank tests) for means (medians).

Panel F: Characteristics of Funds under Management

| Variable | Obs. | Mean | Std. Dev. | P25 | Median | P75 |
|--|------|----------------|-----------|----------------|--------|---------|
| <i>Full Sample</i> | | | | | | |
| Value of funds under management (USD Mil.) | 38 | 1,562.4 | 2,864.6 | 100.0 | 436.6 | 1,700.0 |
| Number of stocks held | 38 | 82.3 | 138.4 | 30.0 | 50.0 | 88.0 |
| Average holding period (Years) | 38 | 3.7 | 4.7 | 1.8 | 3.5 | 4.0 |
| <i>Experimental Sample</i> | | | | | | |
| Value of funds under management (USD Mil.) | 30 | 1,574.9 | 3,192.0 | 100.0 | 364.1 | 2,000.0 |
| Number of stocks held | 30 | 90.1 | 154.8 | 30.0 | 47.5 | 100.0 |
| Average holding period (Years) | 30 | 4.1 | 5.2 | 2.0 | 3.5 | 4.5 |
| <i>Test for differences</i> | | <i>p-value</i> | | <i>p-value</i> | | |
| Value of funds under management (USD Mil.) | | 0.430 | | | 0.957 | |
| Number of stocks held | | 0.464 | | | 0.957 | |
| Average holding period (Years) | | 0.415 | | | 0.296 | |

Presented *p*-values are two-tailed and based on *t*-tests (Wilcoxon sum of rank tests) for means (medians).

Table AMD2: Subject Demographics by Treatment (Survey Experiment)*Panel A: Country of Work*

| Country of Work | VAL/ NBC | MPE/ NBC | VAL/ ABC | MPE/ ABC |
|-----------------|-------------|-------------|-------------|-------------|
| Austria | 1 | 0 | 0 | 1 |
| Belgium | 0 | 2 | 1 | 2 |
| Canada | 1 | 0 | 0 | 3 |
| Croatia | 1 | 0 | 0 | 0 |
| Denmark | 0 | 1 | 1 | 3 |
| France | 0 | 0 | 1 | 0 |
| Germany | 0 | 0 | 2 | 1 |
| Italy | 1 | 1 | 1 | 0 |
| Norway | 0 | 1 | 0 | 1 |
| Portugal | 1 | 0 | 0 | 0 |
| Serbia | 0 | 1 | 0 | 0 |
| Spain | 0 | 0 | 1 | 1 |
| Sweden | 2 | 0 | 0 | 0 |
| Switzerland | 0 | 1 | 2 | 2 |
| United Kingdom | 5 | 5 | 5 | 5 |
| United States | 3 | 0 | 0 | 0 |
| Total | 15 | 12 | 16 | 19 |

The treatments are indicated by VAL: Subjects have the objective to value the firm, MPE: Subjects have the objective to evaluate managerial performance, ABC: Managerial compensation is based on accounting data, NBC: Managerial compensation is based on non-accounting data. Fisher's exact Test for differences between treatment groups p -value (two-tailed) = 0.421.

Panel B: Age Group

| Age Group | VAL/ NBC | MPE/ NBC | VAL/ ABC | MPE/ ABC |
|-----------|-------------|-------------|-------------|-------------|
| 20-25 | 0 | 0 | 1 | 0 |
| 26-30 | 2 | 0 | 1 | 1 |
| 31-35 | 2 | 0 | 1 | 2 |
| 36-40 | 1 | 3 | 2 | 3 |
| 41-45 | 4 | 2 | 3 | 6 |
| 46-50 | 1 | 4 | 5 | 3 |
| 51-55 | 1 | 1 | 0 | 4 |
| 56-60 | 3 | 1 | 1 | 0 |
| >60 | 1 | 1 | 2 | 0 |
| Total | 15 | 12 | 16 | 19 |

The treatments are indicated by VAL: Subjects have the objective to value the firm, MPE: Subjects have the objective to evaluate managerial performance, ABC: Managerial compensation is based on accounting data, IPD: Managerial compensation is based on non-accounting data. Fisher's exact test for differences between treatment groups p -value (two-tailed) = 0.527.

Table AMD2 (continued)*Panel C: Nature of Occupation*

| Occupation | VAL/ NBC | MPE/ NBC | VAL/ ABC | MPE/ ABC |
|---------------------|-------------|-------------|-------------|-------------|
| Fund Manager | 12 | 6 | 8 | 8 |
| Analyst (sell-side) | 3 | 3 | 4 | 7 |
| Analyst (buy-side) | 0 | 3 | 2 | 3 |
| Other | 0 | 0 | 2 | 1 |
| Total | 15 | 12 | 16 | 19 |

The treatments are indicated by VAL: Subjects have the objective to value the firm, MPE: Subjects have the objective to evaluate managerial performance, ABC: Managerial compensation is based on accounting data, NBC: Managerial compensation is based on non-accounting data. Fisher's exact Test for differences between treatment groups p -value (two-tailed) = 0.373.

Panel D: Investment Characteristics

| Investment Characteristic | VAL/ NBC | MPE/ NBC | VAL/ ABC | MPE/ ABC |
|---|-------------|-------------|-------------|-------------|
| <i>By asset class:</i> | | | | |
| Equity only | 13 | 11 | 14 | 15 |
| Debt only | 2 | 1 | 0 | 3 |
| Equity and debt | 0 | 0 | 2 | 1 |
| p -value for differences (two-tailed) | | 0.505 | | |
| <i>By listing type:</i> | | | | |
| Public firms only | 11 | 9 | 12 | 14 |
| Public and private firms | 4 | 1 | 4 | 3 |
| Private firms only | 0 | 2 | 0 | 2 |
| p -value for differences (two-tailed) | | 0.499 | | |
| <i>By industry focus:</i> | | | | |
| None | 6 | 5 | 9 | 7 |
| Non-financial | 6 | 6 | 5 | 9 |
| Financial | 3 | 1 | 2 | 3 |
| p -value for differences (two-tailed) | | 0.908 | | |
| <i>By geographic focus:</i> | | | | |
| Europe | 8 | 8 | 6 | 10 |
| World | 4 | 4 | 8 | 6 |
| North America | 2 | 0 | 2 | 2 |
| Asia | 1 | 0 | 0 | 1 |
| p -value for differences (two-tailed) | | 0.797 | | |
| Total | 15 | 12 | 16 | 19 |

The treatments are indicated by VAL: Subjects have the objective to value the firm, MPE: Subjects have the objective to evaluate managerial performance, ABC: Managerial compensation is based on accounting data, NBC: Managerial accounting is based on non-accounting data.

Table AMD2 (continued)*Panel E: Investment Experience*

| Variable | Obs. | Mean | Std. Dev. | P25 | Median | P75 |
|---|------|----------------|-----------|------|----------------|-------|
| <i>VAL/NBC</i> | | | | | | |
| Number of stocks monitored per year | 15 | 45.5 | 61.4 | 10.0 | 30.0 | 50.0 |
| Years of experience overall | 15 | 21.3 | 10.4 | 15.0 | 20.0 | 30.0 |
| Years of experience in current position | 14 | 11.6 | 11.4 | 3.0 | 8.0 | 16.0 |
| <i>MPE/NBC</i> | | | | | | |
| Number of stocks monitored per year | 12 | 73.2 | 97.6 | 10.0 | 35.0 | 105.0 |
| Years of experience overall | 12 | 21.9 | 9.7 | 16.5 | 20.0 | 15.5 |
| Years of experience in current position | 12 | 9.6 | 5.5 | 5.5 | 10.0 | 11.0 |
| <i>VAL/ABC</i> | | | | | | |
| Number of stocks monitored per year | 14 | 88 | 93.4 | 20.0 | 50.0 | 135.0 |
| Years of experience overall | 16 | 18.4 | 9.7 | 11.0 | 20.0 | 24.5 |
| Years of experience in current position | 15 | 7.5 | 8.7 | 2.0 | 3.0 | 12.0 |
| <i>MPE/ABC</i> | | | | | | |
| Number of stocks monitored per year | 19 | 68.9 | 60.8 | 20.0 | 50.0 | 100.0 |
| Years of experience overall | 19 | 19.9 | 7.1 | 15.0 | 20.0 | 25.0 |
| Years of experience in current position | 19 | 7.6 | 5.8 | 3.0 | 6.0 | 12.5 |
| <i>Test for differences</i> | | <i>p-value</i> | | | <i>p-value</i> | |
| Number of stocks monitored per year | | 0.528 | | | 0.417 | |
| Years of experience overall | | 0.730 | | | 0.900 | |
| Years in current position | | 0.474 | | | 0.263 | |

The treatments are indicated by VAL: Subjects have the objective to value the firm, MPE: Subjects have the objective to evaluate managerial performance, ABC: Managerial compensation is based on financial accounting information, NBC: Managerial compensation is based on non-accounting data. Presented *p*-values for group differences are two-tailed and are based on Wilks' lambda (Kruskal-Wallis rank tests) for means (medians).

Table AMD2 (continued)*Panel F: Characteristics of Funds under Management*

| Variable | Obs. | Mean | Std. Dev. | P25 | Median | P75 |
|--|------|----------------|-----------|-------|----------------|---------|
| <i>VAL/NBC</i> | | | | | | |
| Value of funds under management (USD Mil.) | 11 | 2,463.9 | 4,637.9 | 64.2 | 384.3 | 3,000.0 |
| Number of stocks held | 11 | 69.0 | 72.6 | 18.0 | 45.0 | 100.0 |
| Average holding period (Years) | 11 | 5.8 | 8.1 | 2.5 | 4.0 | 5.0 |
| <i>MPE/NBC</i> | | | | | | |
| Value of funds under management (USD Mil.) | 4 | 266.7 | 167.9 | 162.3 | 233.3 | 371.0 |
| Number of stocks held | 4 | 70.0 | 46.9 | 30.0 | 65.0 | 110.0 |
| Average holding period (Years) | 4 | 2.4 | 1.7 | 1.1 | 2.7 | 3.7 |
| <i>VAL/ABC</i> | | | | | | |
| Value of funds under management (USD Mil.) | 7 | 1,634.3 | 2,111.8 | 57.8 | 974.8 | 2,100.0 |
| Number of stocks held | 7 | 59.3 | 23.9 | 40.0 | 55.0 | 80.0 |
| Average holding period (Years) | 7 | 2.9 | 1.9 | 0.7 | 3.0 | 5.0 |
| <i>MPE/ABC</i> | | | | | | |
| Value of funds under management (USD Mil.) | 8 | 1,629.6 | 2,357.8 | 256.8 | 375.1 | 2,410.0 |
| Number of stocks held | 8 | 159.1 | 288.0 | 23.5 | 52.5 | 129.0 |
| Average holding period (Years) | 8 | 3.4 | 2.0 | 1.9 | 3.2 | 4.2 |
| <i>Test for differences</i> | | <i>p-value</i> | | | <i>p-value</i> | |
| Value of funds under management (USD Mil.) | | 0.719 | | | 0.774 | |
| Number of stocks held | | 0.566 | | | 0.914 | |
| Average holding period (Years) | | 0.561 | | | 0.529 | |

The treatments are indicated by VAL: Subjects have the objective to value the firm, MPE: Subjects have the objective to evaluate managerial performance, ABC: Managerial compensation is based on financial accounting data, NBC: Managerial compensation is based on non-accounting data. Presented *p*-values for group differences are two-tailed and based on Wilks' lambda (Kruskal-Wallis rank tests) for means (medians).

Table AMD3: Manipulation Checks by Treatment (Survey Experiment)

| Passed Manipulation Checks | VAL/ NBC | MPE/ NBC | VAL/ ABC | MPE/ ABC |
|----------------------------|-------------|-------------|-------------|-------------|
| Yes | 15 | 12 | 16 | 19 |
| Failed IAO Treatment Check | 1 | 3 | 0 | 1 |
| Failed EMI Treatment Check | 2 | 2 | 3 | 0 |
| Failed Both | 0 | 1 | 0 | 1 |
| Total | 18 | 18 | 19 | 21 |

The treatments are indicated by IAO: Information Acquisition Objective, EMI: Earnings Management Incentive, VAL: Subjects have the objective to value the firm, MPE: Subjects have the objective to evaluate managerial performance, ABC: Managerial compensation is based on accounting data, NBC: Managerial compensation is based on non-accounting data. Fisher's exact test for differences between treatment groups p -value (two-tailed) = 0.275.

Table AMD4: Sensitivity Tests – Main Analyses Using the Treatment Sample (Survey Experiment)

Panel A: Univariate Treatment Effects by Line Item – Relevance

| | <i>Likert Score Analysis</i> | | | | <i>Verbal Response Analysis</i> | | | | |
|--|--|-------------------|------------------|---|--|---|-------------------|---|------------------|
| | Treatment Sample (76 Interviews) | | | | Treatment Sample (76 Interviews 237 Verbal Responses) | | | | |
| | Information Acquisition Objective Treatment | | | <i>p</i> -value Main Effect (Anova) | Information Acquisition Objective Treatment | | | <i>p</i> -value Main Effect (Logit) | |
| | Managerial Performance Evaluation | Firm Valuation | Diff. (H1: −) | | Obs. | Managerial Performance Evaluation | Firm Valuation | | Diff. (H1: −) |
| | Mean Likert Scores | | | | % Positive Verbal Responses | | | | |
| Financial statements (all) | 5.055 | 5.274 | -0.219 | 0.163 | 237 | 49.5% | 65.4% | -0.159 | 0.011 |
| <i>By financial statement component:</i> | | | | | | | | | |
| Income statement | 5.853 | 5.937 | -0.084 | 0.685 | 100 | 48.6% | 81.0% | -0.323 | 0.011 |
| Balance sheet | 4.576 | 4.876 | -0.300 | 0.144 | 125 | 51.6% | 49.2% | 0.024 | 0.746 |

Table AMD4 (continued)

Panel B: Univariate Treatment Effects by Line Item – Representational Faithfulness

| | <i>Likert Score Analysis</i> | | | | <i>Verbal Response Analysis</i> | | | | |
|--|--|--|------------------|---|--|--------------------------------------|--|------------------|---|
| | Treatment Sample (75 Interviews) | | | | Treatment Sample (76 interviews 398 Verbal Responses) | | | | |
| | Earnings Management Incentive Treatment | | | | Earnings Management Incentive Treatment | | | | |
| | Accounting- Based Compensation | Non- Accounting- Based Compensation | Diff. (H2: –) | <i>p</i> -value Main Effect (Anova) | Obs. | Accounting- Based Compensation | Non- Accounting- Based Compensation | Diff. (H2: –) | <i>p</i> -value Main Effect (Logit) |
| | Mean Likert Scores | | | | | % Positive Verbal Responses | | | |
| Financial statements (all) | 4.711 | 4.770 | -0.059 | 0.391 | 398 | 31.1% | 28.6% | 0.025 | 0.873 |
| <i>By financial statement component:</i> | | | | | | | | | |
| Income statement | 5.159 | 5.178 | -0.019 | 0.602 | 113 | 29.5% | 17.3% | 0.122 | 0.236 |
| Balance sheet | 4.443 | 4.527 | -0.084 | 0.480 | 196 | 26.2% | 20.2% | 0.059 | 0.679 |

The analysis presented in these panels is based on the *Treatment Sample* (76 interviews). The interview coding process is described in the coding handbook on the GitHub repository. Panel A (Panel B) presents univariate differences in *relevance (representational faithfulness)* across the two different information acquisition objectives, i.e., *managerial performance evaluation* and *firm valuation*. Reported average Likert scores are based on the level of agreement with the statement ‘*For my objective in the case, I assess the following financial accounting information items to be relevant/faithfully represented.*’ The Likert scale used ranges from 1 (strongly disagree) to 7 (strongly agree), with higher values indicating higher levels of assessed relevance/representational faithfulness. The tone of each coded verbal response is classified as negative, neutral, or positive. The percentage of positive verbal responses captures the overall proportion of positive verbal response over the sum of negative, neutral, and positive verbal responses. The tests for statistical significance in the Likert score analysis are based on the relevant main effect of interacted Anova models, whereas the tests for statistical significance in the verbal response analysis are based on Wald tests of the relevant main effects in interacted Logit models. Missing statistics are due to lack of variation in any of the four experimental cells. Statistically significant differences below the 10% level (two-tailed) appear in bold print.

Table AMD4 (continued)

Panel C1: Multiple Regression Analysis – Relevance – Likert Scores

| | Likert Scores | | | | | |

These panels report the experimental effects of our 2×2 between-subject manipulations on the assessed usefulness of financial accounting information. Panels C1 and C2 present evidence on the relevance of accounting information, whereas Panels D1 and D2 present evidence on the representational faithfulness of accounting information. The tests are based on the *Treatment Sample*, comprising the 76 observations that received the final treatment including the 14 subjects that failed the manipulation checks. In both Panels C and D, all model specifications are based on OLS regressions and two-tailed *p*-values are presented in parentheses below coefficients. Control variables account for years of experience, gender, accounting expertise, financial firm focus, debt instrument focus, and sell-side focus. The presented *p*-values for the experimental main effects are based on Wald tests of the joint significance of the coefficients of the main effect of the regression above plus 0.5 times the interaction effect. Bootstrapped standard errors (1,000 iterations) are clustered at the interviewer level. ***, **, and * denote statistical significance at the 1%, 5%, and 10% levels (two-tailed), respectively.

The tests presented in this panel are based on the *Treatment Sample*, comprising the 76 observations that received the final treatment, including the 14 subjects that failed the manipulation checks. The coding process is described in the coding handbook on the GitHub repository. The dependent variable is an indicator variable coded as one whenever a coded statement used the respective rationale. The model specifications presented in Columns (1), (3), (5), and (7) are based on Logit estimation with bootstrapped standard errors. The model specifications presented in Columns (2), (4), (6), and (8) are based on OLS estimation with bootstrapped standard errors (1,000 iterations) clustered by interviewer. Control variables account for years of experience, gender, accounting expertise, financial firm focus, debt instrument focus, and sell-side focus, as well as for interviewer and verbal response coder fixed effects. The presented *p*-values for the experimental main effects are two-tailed and based on Wald tests of the joint significance of the coefficients of the main effect of the regression above plus 0.5 times the interaction effect. Two-tailed *p*-values are reported in parentheses below the coefficients. ***, **, and * denote statistical significance at the 1%, 5%, and 10% levels (two-tailed), respectively.

This table reports descriptive statistics for the main variables used in our 2×2 between-subject design. Panel A presents distributional information for dependent variables, treatment variables and controls, whereas in Panel B Spearman (Pearson) correlations among main variables are presented above (below) the diagonal. Statistically significant correlations with *p*-values below the 10 % level (two-tailed) appear in bold print.

This table reports the experimental effects of our 2×2 between-subject manipulations (i.e., information acquisition objective treatment and earnings management incentive treatment) on the assessed usefulness of financial accounting information with control variables. Survey materials and details of the coding process are presented on the GitHub repository. Panel A presents evidence on the relevance of accounting information, whereas Panel B presents evidence on the representational faithfulness of accounting information. The tests are based on the *Experimental Sample* (62 interview observations). All model specifications are based on OLS regressions. The presented *p*-values for the experimental main effects are two-tailed and based on Wald tests of the joint significance of the coefficients of the main effect of the regression above plus 0.5 times the interaction effect. Two-tailed *p*-values are reported in parentheses below coefficients and are based on bootstrapped standard errors (1,000 iterations), clustered at the interviewer level. ***, **, and * denote statistical significance at the 1%, 5%, and 10% levels (two-tailed), respectively.

Table AMD7: Treatment Effects on Rationales Justifying Higher Usefulness Assessments (Survey Experiment)

| | <i>Dependent variable: Stated Rationales</i> | | | | | | | |
|---|---|--------------|---------------------------------------|--------------|-------------------------------|--------------|---|--------------|

The tests presented in this table are based on *Experimental Sample* (62 interview observations). Details of the coding process are presented in the coding handbook on the GitHub repository. The dependent variable is an indicator variable coded as one whenever a coded statement used the respective rationale. The model specifications presented in Columns (1), (3), (5), and (7) are based on Logit estimation with bootstrapped standard errors. The model specifications presented in Columns (2), (4), (6), and (8) are based on OLS estimation with bootstrapped standard errors (1,000 iterations) clustered by interviewer. The presented *p*-values for the experimental main effects are two-tailed and based on Wald tests of the joint significance of the coefficients of the main effect of the regression above plus 0.5 times the interaction effect. Two-tailed *p*-values are reported in parentheses below the coefficients. ***, **, and * denote statistical significance at the 1%, 5%, and 10% levels (two-tailed), respectively.

Table AMD8: Assessments of Governance Quality and Financial Accounting Information Usefulness (Survey Experiment)

| | Relevance | | | | Representational Faithfulness | | | |

This table examines the effect of cross-sectional variation in assessed governance on the assessed usefulness of financial accounting information. The tests are based on the *Experimental Sample* (62 interview observations). Survey materials and details of the coding process are presented on the GitHub repository. All models are based on OLS estimation with bootstrapped standard errors (1,000 iterations) clustered by interviewer. The presented *p*-values for the experimental main effects are two-tailed and based on Wald tests of the joint significance of the coefficients of the main effect of the regression above plus 0.5 times the interaction effect. Two-tailed *p*-values are reported in parentheses below the coefficients. ***, **, and * denote statistical significance at the 1%, 5%, and 10% levels (two-tailed), respectively.

Table AMD9: Relative Importance of Alternative Information Sources (Survey Experiment)

| <i>Dependent variable: Relative Share of Accounting Information</i> | |
|---|--------------|
| <i>Experimental treatment effects:</i> | |
| (A) Information acquisition objective: | 0.169*** |
| Managerial performance evaluation | (0.007) |
| (B) Earnings management incentive: | -0.018 |
| Accounting-based compensation | (0.541) |
| (A) × (B) | -0.134* |
| | (0.070) |
| <i>Controls:</i> | |

| Focus on debt instruments | 0.073 |
| | (0.491) |
| Sell-side focus | 0.063 |
| | (0.478) |
| Interviewer fixed effects | Yes |
| <i>p</i> -value of test for main effect (A) | 0.017 |
| <i>p</i> -value of test for main effect (B) | 0.008 |
| Obs. (interviews) | 62 |
| R ² | 0.275 |

This table reports the results of the additional information sources analysis, including additional control variables. Survey materials and details of the coding process are presented in the coding handbook on the GitHub repository. Tests are conducted on the *Experimental Sample* (62 interview observations) using OLS estimation and bootstrapped standard errors (1,000 iterations) clustered by interviewer. The presented *p*-values for the experimental main effects are two-tailed and based on Wald tests of the joint significance of the coefficients of the main effect of the regression above plus 0.5 times the interaction effect. Two-tailed *p*-values are reported in parentheses below the coefficients. ***, **, and * denote statistical significance at the 1%, 5%, and 10% levels (two-tailed), respectively.

Table AMD10: Response Rate (Follow-Up Online Experiment)

| Group | # emails sent | # responded | Response rate (unadjusted) | Did manipulation checks | Passed both manipulation checks | Started assignment | Completed assignment |
|----------------------------------|---------------|-------------|----------------------------|-------------------------|---------------------------------|--------------------|----------------------|
| Security Analyst, Europe | 10,091 | 410 | 4.10% | 91.50% | 74.60% | 90.70% | 73.20% |
| Security Analyst, North America | 21,351 | 267 | 1.30% | 88.00% | 73.80% | 88.00% | 79.00% |
| Security Analyst, Rest of World | 12,110 | 226 | 1.90% | 88.90% | 72.10% | 88.50% | 74.80% |
| Portfolio Manager, Europe | 5,376 | 162 | 3.00% | 89.50% | 75.30% | 87.00% | 75.90% |
| Portfolio Manager, North America | 9,722 | 97 | 1.00% | 94.80% | 82.50% | 92.80% | 88.70% |
| Portfolio Manager, Rest of World | 5,255 | 79 | 1.50% | 84.80% | 68.40% | 84.80% | 74.70% |
| Total | 63,905 | 1,241 | 1.90% | 89.80% | 74.30% | 89.00% | 76.40% |

This figure presents the response behavior by sample groups. The response rates are unadjusted for the 7,507 delivery failures.

Figure AMD1. Time Distribution of Responses to the Follow-Up Online Experiment (June 26, 2019 through July 16, 2019)

This figure provides the rate of response by date and time.
